Sustained Positive SSTG with signs of Recovering ATP

Achieved **POSITIVE SSTG** (same-store transaction count growth) in 3Q2026.

Average transaction price (ATP) continued to stabilize, recorded a modest sequential uptick compared to 2Q2026, supported by a series of marketing initiatives, against the backdrop of the gradual rationalization in third-party aggregator platform (3PP) subsidies.

SSSG (same-store sales growth) remained negative mainly due to decreased ATP as compared to 3Q2025, although a healthy YoY transaction count growth delivered and signs of gradual ATP recovery observed.

Delivery penetration in New City Markets increased to 30% of total transaction volumes in 3Q2026, compared to 25% in 1H2026, as we continue to roll out delivery services. 3PP remained an important channel in New City Markets as we further penetrate delivery in these markets.
